Review-feedback

on the educational and professional program "Geology of Oil and Gas"
in specialty E4 "Earth Sciences"
of the second (master's) level of higher education
at the National University "Yuriy Kondratyuk Poltava Polytechnic

The educational and professional program "Geology of Oil and Gas" is relevant, because it combines a deep theoretical foundation with a practical orientation, and is also focused on the formation of professional competencies that are in demand in modern conditions of development of the energy industry.

North University, Varaždin, Croatia fruitfully cooperates with the National University "Poltava Polytechnic named after Yuriy Kondratyuk" within the framework of a bilateral agreement signed in 2016, and under the international program ERASMUS+ (2018-2019). Therefore, it is worth noting the friendly and fruitful cooperation of the department with leading oil and gas companies, as well as with scientific institutions. Such interaction creates a favorable environment for the professional development of students, their participation in joint projects, internships, industrial practices and scientific research.

The Department of Drilling and Geology demonstrates a high level of development of science and innovative activity. Teachers actively involve students in scientific research, participation in conferences. This contributes to the formation of a young scientific school focused on solving urgent problems in the industry - from prospecting to exploration of deposits. It is especially pleasant to note the atmosphere of partnership, mutual respect and openness that prevails at the department. Students feel the support of teachers who not only transfer knowledge, but also become mentors, help develop initiative, critical thinking and the desire for professional growth.

The Department of Drilling and Geology confidently keeps pace with the times, ensuring high quality education, close ties between science and production and creating conditions for training specialists who can adequately represent Ukraine at the international level. Thus, I believe that the educational and professional program "Geology of Oil and Gas" in the specialty E4 "Earth Sciences" of the second (master's) level of higher education meets the modern requirements of the labor market, provides a comprehensive approach to training specialists and can be recommended for implementation in the educational process.
