

## REVIEW-MENTION

for educational and scientific program "**Industry engineering**"  
third (educational and scientific) level of higher education  
by specialty **133 "Industry engineering"**

The educational and scientific program "**Industry engineering**" submitted for review was developed by a project group consisting of three scientific and pedagogical workers working at the **National University "Yuri Kondratyuk Poltava Polytechnic"** at the main place of work and fully comply with the licensing conditions for the implementation of educational activities for qualification and participation in other project teams.

The program stipulates that, provided that all the requirements of the educational and scientific program are met, during the period of study, the applicant receives theoretical knowledge, abilities, skills and other competencies sufficient for the production of new ideas, solving complex problems in the field of professional and research and innovation activities, masters the methodology of scientific and pedagogical activity, conducts its own scientific research, the results of which are of scientific novelty, theoretical and practical significance.

The educational and scientific program is consistent and contains all the structural elements necessary for this type of documentation.

The total budget of time for studying third-level disciplines on the basis of the second level of higher education is 1800 hours (60 ECTS credits). The curriculum for the preparation of a Doctor of Philosophy provides for the study of academic disciplines of the cycle of general and professional training. Applicants for higher education have the right to choose academic disciplines in the amount of at least 25% of the total number of ECTS credits.

The sequence of studying disciplines, the plan and schedule of the educational process correspond to the structural and logical scheme of training applicants for higher education in this specialty and contribute to ensuring that the programmatic learning outcomes correspond to the requests of potential employers.

Considering the above, I believe that the educational and scientific program "Industrial Engineering" of the third (educational and scientific) level of higher education can be recommended for use in the preparation of applicants for higher education in the specialty 133 "**Industrial Engineering**".
